

UTILISATION OF A WARP KNITTING MACHINE FOR THE
MANUFACTURING OF OPEN OR CLOSED TUBES FOR PROTECTING
CABLES, CONDUITS AND THE LIKE, AND PROTECTING TUBE
MANUFACTURED WITH SAID MACHINE

5

This invention relates to the utilisation of a warp knitting machine for the manufacturing of open or closed tubes for protecting cables, conduits and the like, mainly for the protection of automobile cables.

10

The protecting tube is characterised in that the yarns (1, 2, 3) that form the tube are weaved with each other by tricot, tuch, samt, satin, atlas, köper, laying in and/or chain type stitches.

This permits the manufacture of tubes of larger diameter and with lower wall thickness, which also have greater abrasion resistance.
